

Claims

- [c1] An apparatus to store and carry mobile audio-video components, comprising:
- a first compartment adapted to store a video screen;
 - a second compartment adapted to store a video player;
 - wherein the two compartments are connectable to form a single storage unit in a manner that protects the audio-video components; and
 - wherein the two compartments are distinct and completely separable for operation of the audio-video components.
- [c2] The apparatus of claim 1, wherein the video screen is secured into the one compartment using a method selected from the group consisting of Velcro®, snaps, ties or zippers.
- [c3] The apparatus of claim 2, wherein the first compartment further comprises mounting means permitting attachment to a headrest or center console of a vehicle.
- [c4] The apparatus of claim 3, wherein said mounting means are selected from the group consisting of Velcro®, snaps, ties or zippers.
- [c5] A mobile audio-video system comprising:
- a storage case having a first and second compartment and connecting means between said first and second compartments;

a video display located within said first compartment;
a video player located within said second compartment;
wherein said storage case is a single unit when said
connecting means are closed; and
wherein said first and second compartments can be
separated from each other when said connecting means are
open.

[c6] The system of claim 5, wherein the video player is a videocassette player.

[c7] The system of claim 5, wherein the video player is a DVD player.

[c8] The system of claim 5, wherein the video player is secured into the second compartment using a method selected from the group consisting of Velcro®, snaps, ties or zippers.

[c9] The system of claim 5, wherein the video player and the video screen are connected by wires, and further comprising an opening in one or more of said compartments for the routing of said wires.

[c10] The system of claim 1, further comprising power adapter means for connecting said video player and video screen to a power source.

[c11] The system of claim 10, wherein the power source is an automobile.

[c12] The system of claim 5, further comprising means on said first

compartment for securing said first compartment to a head rest or center console of a vehicle.

[c13] The system of claim 5, wherein said video player and video screen may be operated with said first and said compartments in a partially connected state, wherein said connecting means are not fully closed and not fully closed.
